

llama.cpp, CPU or Adreno GPU, one request

```
graph TD; HW[Hardware] -- "clock caps" --> Sensors[Sensors  
skin, battery,  
DDR, CPU]; Sensors --> Kernel[Kernel applies  
the lower of user  
and vendor cap];
```

The diagram illustrates the flow of clock caps from hardware to the kernel. It starts with a dashed line labeled "clock caps" pointing to a box labeled "Sensors" which lists "skin, battery, DDR, CPU". An arrow then points from the "Sensors" box to a box labeled "Kernel applies the lower of user and vendor cap".
