

GPU row: the battery tier caps the GPU clock; K is held at 1024.

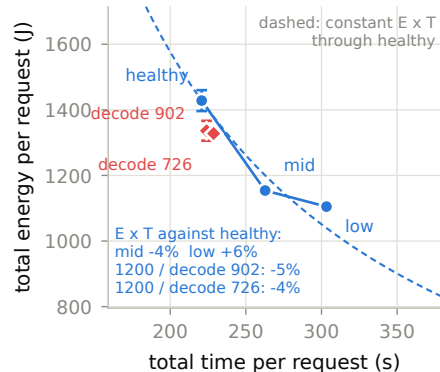

(a) GPU, 4096 output tokens: total energy

(b) total time: prefill (grey) + decode

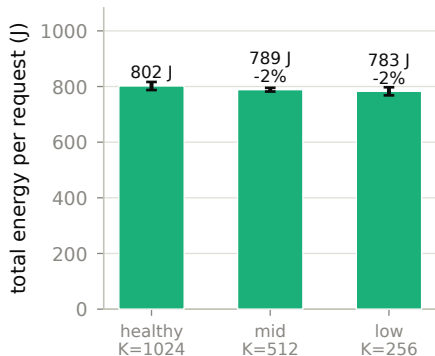

(c) energy against time

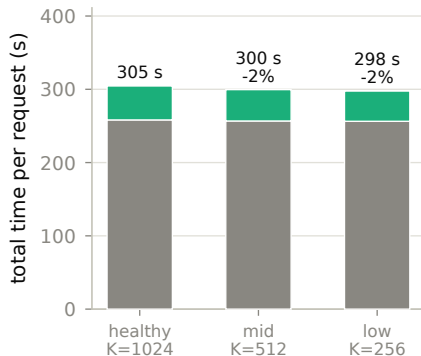

CPU row: the battery tier sets K; the clock is untouched. Not comparable with the GPU row.

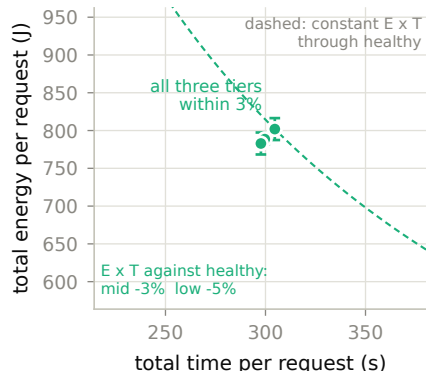

(d) CPU, 1024 output tokens: total energy

(e) total time: prefill (grey) + decode

(f) energy against time

OnePlus 15, Llama-3.2-1B, 9737-token prompt. Same command line every arm; only the battery state the controller reads differs. n=3 per arm. Tiers: healthy above 50% or mains, mid 21 to 50%, low 20% or less. CPU caps pinned, cooled per cell. Energy = USB rail + battery pack.
